IDEATION PHASE

Define the Problem Statements

Date	03 October 2026
Team ID	SWTID-2026-6390
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Problem Statement Template

The statements below follow the template flow: I am (Customer), I'm trying to, But, Because, Which makes me feel. Each one is written from the point of view of a real user of the Institution Details table.

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an EEE branch student user with the bb1 role	open the Institution Details list and read the EEE branch records	I should not be able to see records of other branches such as ECE or CSE	the READ ACL has to check the Branch = EEE condition and my role before showing any record	safe and sure that I only see the data meant for me
PS-2	a ServiceNow administrator who manages security for the table	give each user only the actions they really need on the records	some users need to create records, some only edit them, and some need to delete them	CREATE, WRITE and DELETE are separate ACLs tied to the bb2, bb3 and bb4 roles	organised and in control, because I can decide and check each permission
PS-3	a user who has no bb1 role but opens the Institution Details table	find out why I cannot see any records or actions	the script-based ACL returns false for users who are not administrators or bb1 members	the table is protected from anyone without the required role	a little confused at first, but I trust that the data is being protected

Problem Statement Interpretation

- **PS-1** is about visibility. An EEE user should find the records they need without any chance of opening other branch data.
- **PS-2** is about control. The administrator wants permissions split by operation so that nobody gets more access than needed (least privilege) and every rule can be tested.
- **PS-3** is about clarity. When access is denied, the result should be consistent and understandable, and testing with impersonation should confirm it.
- All three statements support the project goal of stopping unauthorised viewing, creating, editing and deleting of Institution Details records, while administrators keep full access.
