ACCEPTANCE TESTING

UAT Execution & Report Submission

Date	03 October 2026
Team ID	SWTID-2026-6390
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

1. Purpose of Document

This document records the User Acceptance Testing (UAT) done for the Script-Controlled ACL project. The aim of the testing was to check whether the ACLs configured in ServiceNow correctly allow or restrict users according to their roles and the Branch value of the Institution Details records. The test cases, results, acceptance criteria and the evidence to be attached are listed below.

2. Defect Analysis

No known defects were identified during the documented UAT. All six test cases passed, so every defect count in the table below is zero.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
External	0	0	0	0	0
Fixed	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Totals	**0**	**0**	**0**	**0**	**0**

3. Test Case Analysis

Six functional test cases were executed. They cover READ, CREATE, WRITE and DELETE permissions, administrator access and access by a user without the required role. All six passed.

Section	Total Cases	Not Tested	Fail	Pass
User & Role Management	2	0	0	2
Institution Details Records	1	0	0	1
READ Access Control	1	0	0	1
CREATE / WRITE / DELETE Permissions	2	0	0	2
Total	**6**	**0**	**0**	**6**

4. UAT Test Execution Summary

Test ID	User / Roles	Test Action	Expected Result	Status
TC-01	EEE user with bb1	User with bb1 opens the Institution Details list.	EEE records are available to the user.	**Pass**

Test ID	User / Roles	Test Action	Expected Result	Status
TC-02	User without bb1	User without bb1 tries to access the protected records.	Protected records are not accessible.	**Pass**
TC-03	Administrator	Administrator opens the Institution Details list.	Administrator can view records from all branches.	**Pass**
TC-04	bb1 + bb2	User opens the Institution Details list.	The New button is available and the user can create a record.	**Pass**
TC-05	bb1 + bb2 + bb3	User opens an EEE record.	The user can view and edit the record, and New is available.	**Pass**
TC-06	bb1 + bb2 + bb3 + bb4	User uses the record actions.	The user can view, create, edit and delete EEE records.	**Pass**

5. UAT Acceptance Criteria

ID	Area	Acceptance Criteria	Result
AC-01	Read access	A user with bb1 can open and view the permitted EEE records.	**Pass**
AC-02	Unauthorized access	A user without bb1 cannot access the protected records.	**Pass**
AC-03	Administrator access	The administrator can view records from all branches.	**Pass**
AC-04	Create access	A user with bb1 and bb2 can create a record.	**Pass**
AC-05	Write access	A user with bb1, bb2 and bb3 can edit permitted EEE records.	**Pass**
AC-06	Delete access	A user with all four roles (bb1 to bb4) can delete permitted EEE records.	**Pass**

6. Open Issues / Exceptions

No open issues were identified during the documented UAT execution. Performance measures such as response time, load capacity or request rate were not part of the UAT evidence, and no performance testing is claimed in this report.

7. UAT Evidence to Attach

The following screenshots are to be attached with this report before submission.

Evidence	Area	Screenshot to Attach
Evidence 1	EEE user	Screenshot of the EEE user record in ServiceNow User Administration.
Evidence 2	Roles	Screenshot showing the bb1, bb2, bb3 and bb4 roles.
Evidence 3	Institution Details table	Screenshot of the u_institution_details table and its fields.
Evidence 4	Records	Screenshot showing the EEE, ECE and CSE records.
Evidence 5	READ ACL	Screenshot of the READ ACL showing bb1, Branch = EEE, the Advanced option and the script.
Evidence 6	EEE user verification	Screenshot of the records visible to the EEE user.
Evidence 7	Administrator verification	Screenshot showing the administrator's full access.
Evidence 8	CREATE / WRITE / DELETE	Screenshots of the bb2, bb3 and bb4 ACL configurations and the resulting actions.

8. UAT Result

Based on the documented test execution, the Script-Controlled ACL configuration satisfied the defined functional acceptance criteria. All six recorded test cases passed, and no defects or open exceptions were identified during the documented UAT.

9. UAT Sign-off
